Description

Perfect for Youtube videos, business or school presentations, video journalism, video production work, keynote addresses... or any kind of event! Use your teleprompter wherever you are. Used by vloggers, teachers, keynote speakers, singers, businessmen, broadcasters, students, priests...

Features:

TELEPROMPTER SETUP:

- Record yourself and save your videos to your camera roll (Video and audio recording).
- Use the Smart Scroll: Voice Recognition.
- Speed:
 - Words per minute - from 25 wpm to 350 wpm.
 - Chinese/Japanese mode.
- Mirror mode - Mirror text for use with teleprompter glass rigs.
- Background color.
- Autostart timer (countdown).
- Change video-view size.
- Reading guide and line indicator to help keep your place.
- Adjust the script width: your script will automatically scroll closely to the camera, so it always looks like you're looking directly at the lens.
- Auto record option.
- Landscape and portrait mode.
- Overlay transparency.

- Video content mode.
- Camera: rear or front.
- Adjust the video resolution.
- Apply real-time video effects.
- Customise your favourite font style.

VIDEO EFFECTS:

- You can also use the camera to record videos with special effects without the teleprompter feature.

EDITOR:

- Individual script speed.
- Font family: Arial, Times New Roman, Courier, Helvetica, Verdana and many more.
- Font size: 20, 30, 40, 50, 60, 70, 80, 90, 100, 110, 130 and 150px.
- Font color: black, white and any RGB color.
- Font weight: bold / light.
- Highlight your keywords: underline, italic, strikethrough...
- Text alignment.
- Background color.
- Adjust the line spacing.
- Add notes, comments, indexes or anything you need to remember during your speech.
- Sort your scripts easily.

IMPORT:

- Create your own scripts or import them from other apps such as Google Drive, DropBox, Spark, Gmail...
- Use the 'Open with' option that is available, for example, in iOS mail apps.
- Select your text from any app and press the 'Send to Autokue' button.
- Files accepted: .txt, .rtf, .doc, .docx and .pdf.

OTHER FEATURES:

- Video promotions available.
- Biometrical access to protect your scripts from undesired hands.
- Drag and drop elements in the player - move your video-view.
- Estimated remaining time and elapsed time on the screen.
- Move the teleprompter up and down easily.
- Historical speeches are available to train with them.
- Share your scripts with your teammates and friends.
- Customer support messaging system - Are you having issues? need help? we will help you as soon as possible.
- WhatsApp and iMessage stickers.
- Zip your files.

TELEPROMPTER CONTROL:

- Remote control app available.
- Apple Watch remote control app included.
- Remote Keyboards.

- File Manager for Mac OS lets you create and edit scripts easily and send them to the app in real-time.

LANGUAGES:

- English, Spanish, Japanese, Italian, Korean, Turkish, German, Chinese, French, Hindi, Portuguese, Russian (New languages coming soon).

How to import scripts

Option 1: Use the “Import script” button on the home screen.

Option 2: You can use any cloud service such as Google Drive, Box, Dropbox... Mail apps or any other app that include the 'Export'/'Share'/'Open in' function.

Option 3: Use the “New script” button on the home screen. Then, write your script or “Copy/Paste”.

Files will be imported with your favourite font style (adjustable in the settings screen), unless you are importing a .rtf file; in this case, the format will be the one in the file.

Files accepted: .doc | .docx | .txt | .rtf | .pdf

Google Drive + Google Docs example:

1. Open Google Drive and select your file. Select it and Google Docs will be opened.

2. Press the three dots icon.

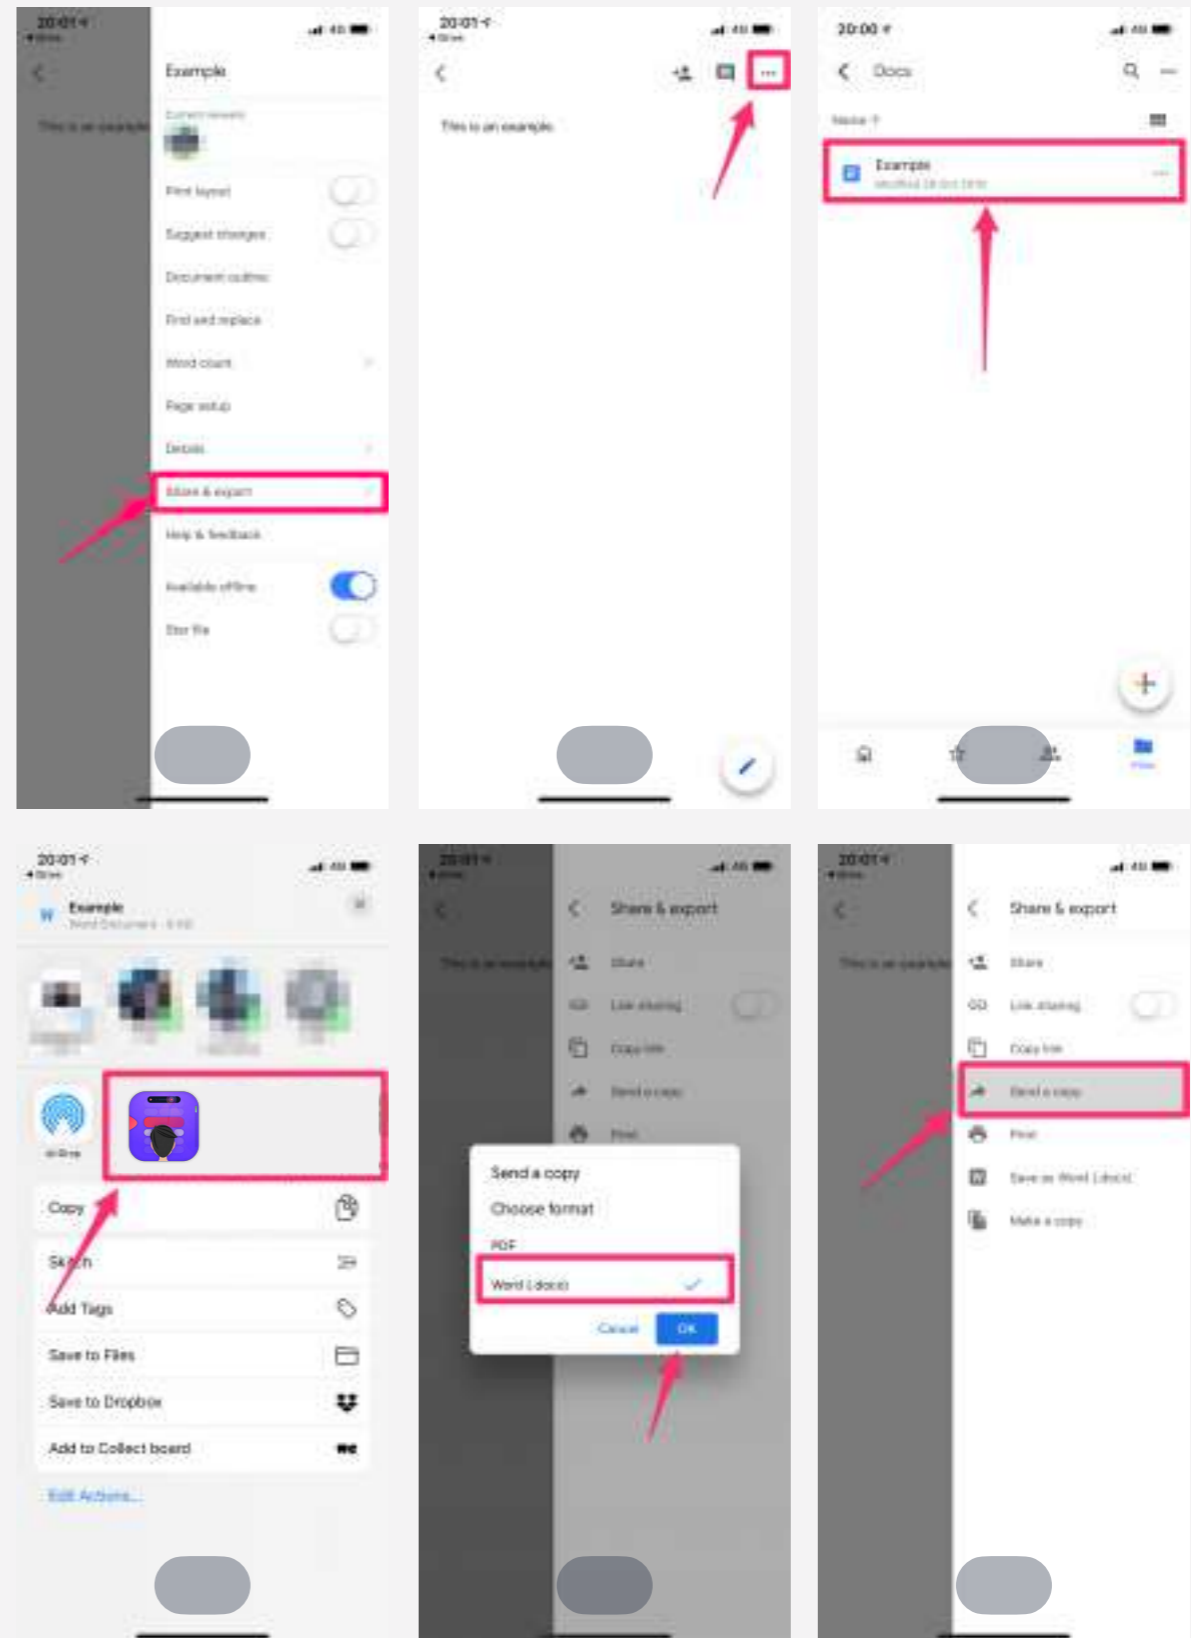

3. Press 'Share & Export'

4. Press 'Send a copy'

5. Select 'Word (.docx)' and press 'OK' button.

6. Select the 'Autokue' app. If you cannot find the app, scroll to the right and press 'More'. There, press the 'Edit' button and add the app to your favorites.

7. Your script will appear in the app.

Mail App example

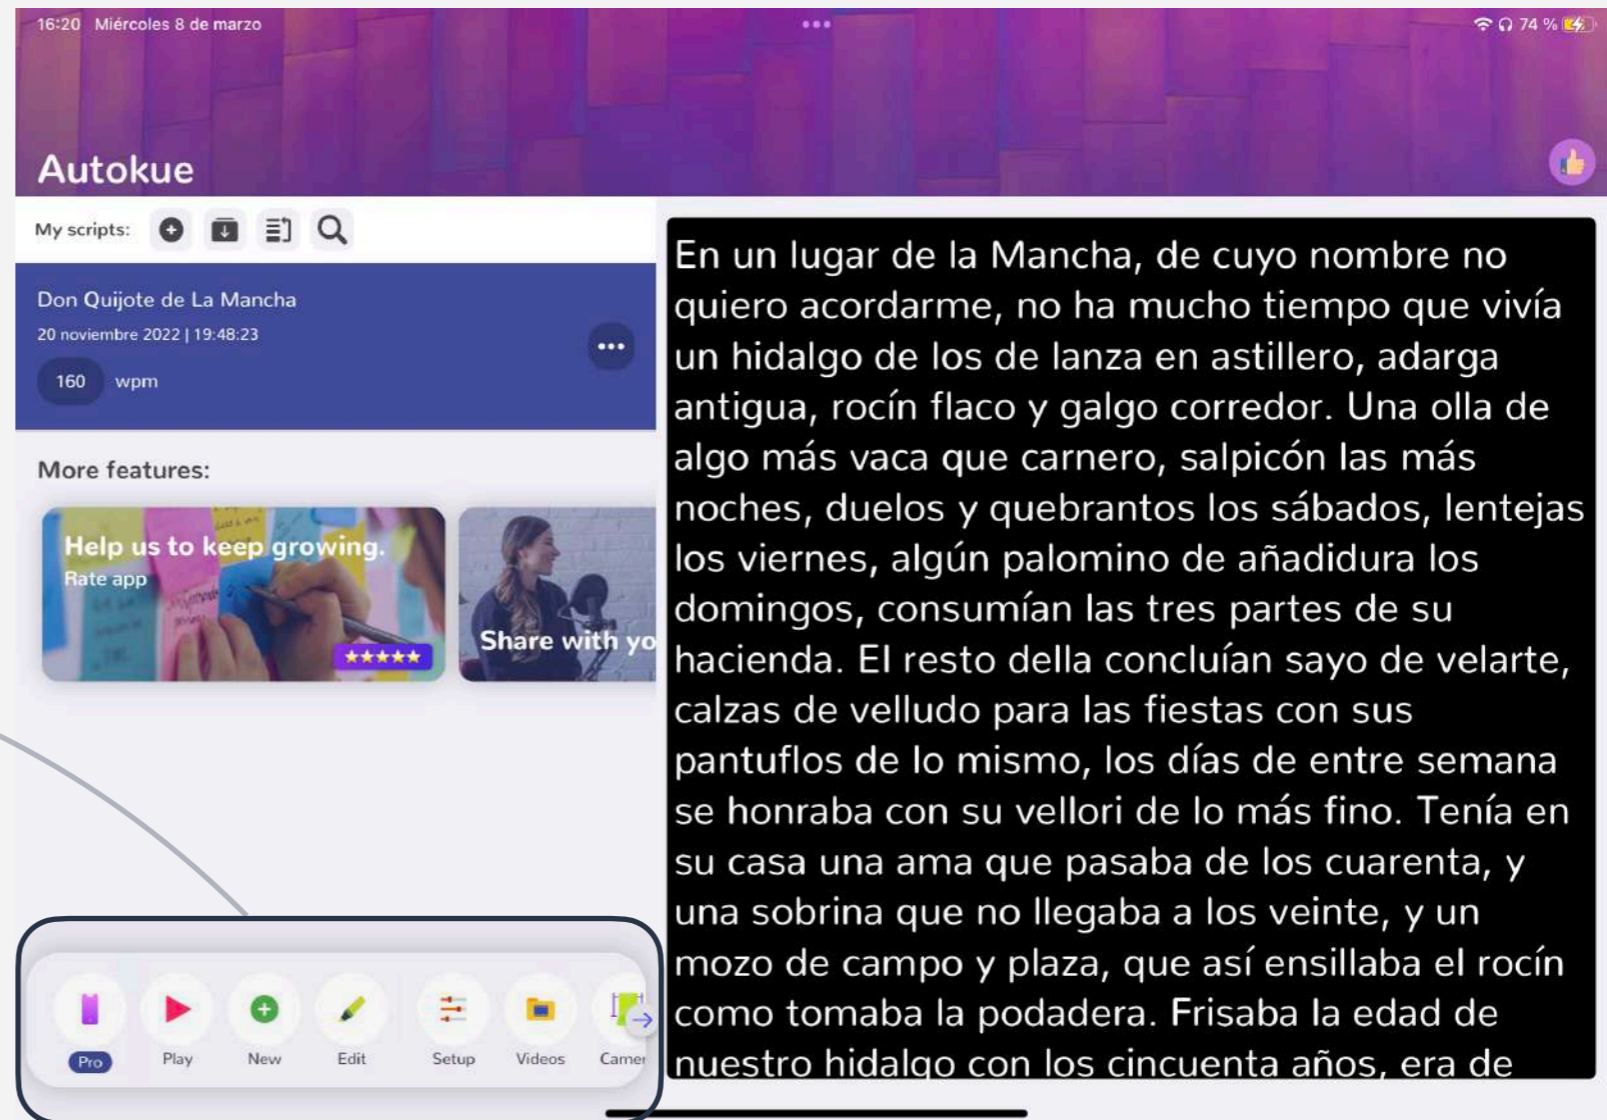

- Open the email that contains the attachment.
- Make sure the file has been downloaded to iOS Mail. (Tap 'Tap to Download' if you see it in an attachment's outline.)
- Tap and hold the attached file's outline until a menu comes up.
- Select the desired app and action from the menu.
- If the desired app does not appear in the list: Make sure you scroll the list; the desired app maybe just out of sight. Tap More. Make sure the desired app is enabled. Tap Done.

Home

This is the main screen where you have your scripts.

Available actions in the menu bar:

- Your tier/edition. Press to upgrade
- Play the selected script.
- Create a new script.
- Edit the selected script.
- Open settings.
- Open the video gallery.
- Open the camera to use it with filters and without the teleprompter function.
- More options.

From the 'file cell' you can preview your script, change its speed or delete it. Swipe from right to left is also available to delete your scripts.

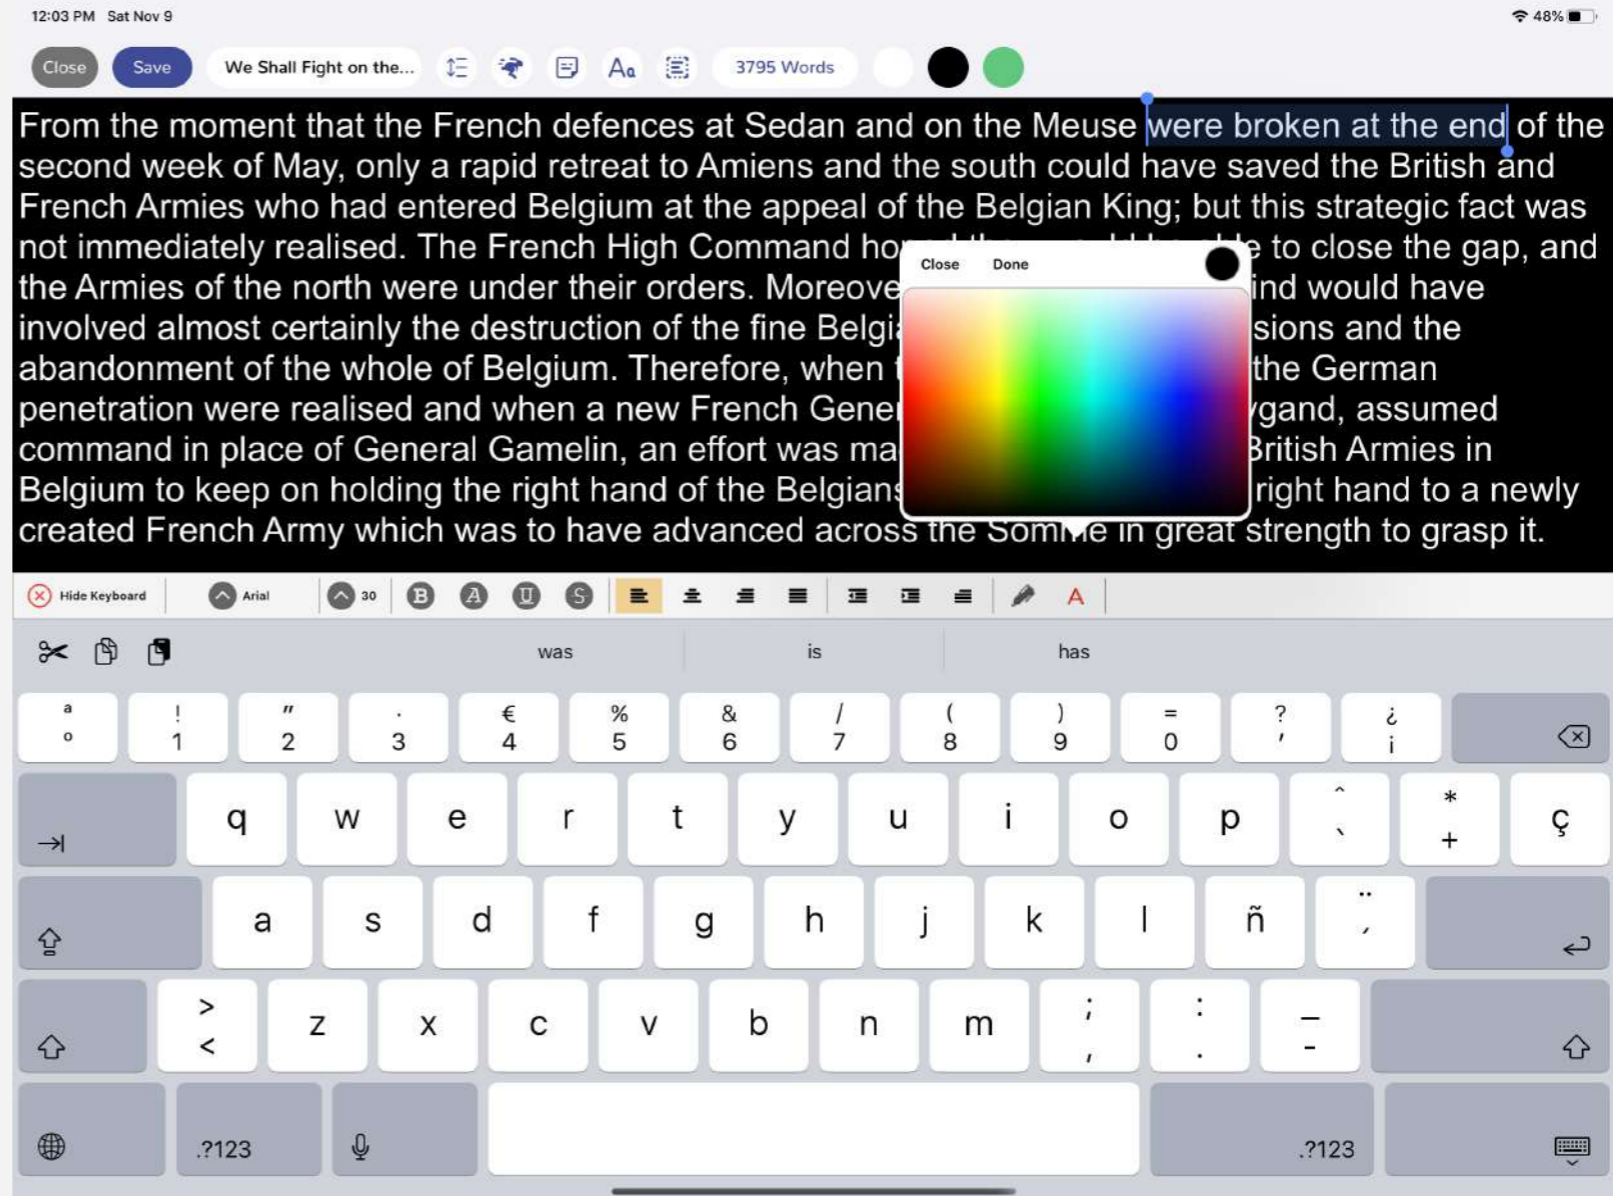

Share your stories and follow Autokue in social networks. 👍

Editor

In the editor you can customise your script.

Available actions in the navigation bar:

- Close the script.
- Save your script.
- Rename or set the name of the script.
-
- Change the line spacing of the whole text.
- Change the speed of the current script.
- Edit the index, notes or whatever you need to remember during your presentation.
- Set your favourite font-style to the whole text.
- Select the whole text.
- Count the words of the script.
- Change the background color.

When you select a word, sentence, paragraph or even all the text, you will be able to change its format with the buttons available above the keyboard:

Font-family, font-size, bold, italic, underline, strikethrough, text-alignment, text-indentation, text-highlighting, text-color.

Editor

Examples:

To change the whole text font size:

Select all the text or press the “Select All” button  and from the menu above the keyboard choose your size.

Change background and text color:

In the navigation bar press the “Green button” and choose your color; this will change the background.

Then, press the “Select All” button in the navigation bar and then press the text-color button  available in the menu above the keyboard. Now, choose your color.

This kind of configuration lets you apply different setups to your scripts, because every speech is different.

Settings

Smart Scroll

Smart scrolling allows you to forget about speeds. The teleprompter advances only when the words you have said match those in your script.

The language used is the one you have in your device settings.

This feature is only available for users using iOS 13+.

Pause when silent

Pause the script when not speaking. This other option allows you to fit the speed to your needs. The teleprompter advances only when you speak; however, you cannot go out of your script because this feature does not look for words, only for noise/silence.

Smart Scroll:
Speech Recognition
to move your script
magically.

Settings

The setup screen allows you to prepare your teleprompter before the speech. Each option you change will be saved automatically. You can configure these things:

- **Mirror mode:**
 - **Enabled:** to use with professional rigs. If this is switched on, the text in the teleprompter will appear flipped.
 - **Disabled:** Normal mode.
- **Background colour:** Change the default background color of the teleprompter screen. To change the font color, edit each script.
- **Countdown:** Allows you to start playing the script after a countdown.
- **Text speed:** It adjusts the default speed in case you do not set in each script. The speed is in words per minute. To change to 🇨🇳 🇯🇵 mode press the right button ("WPM").
- **Guide:** The guide of the teleprompter. It indicates the line where you should be reading. You can place it on the top of the screen or in the middle.
- **Script width:** This option allows you to adjust the width of the text. To look directly at the camera lens set it $\leq 50\%$. This option only works in landscape mode.
- **Video view size:** Adjust the size of the video. It can be full screen or the percentage you want. To enable the full screen mode switch on the toggle.

Settings

- **Overlay transparency:** It adjusts the opacity of the text-box.
- **Auto-video record:** Enable this option to start recording just after accessing the teleprompter screen. Don't worry about the beginning of the video, you can cut it in the iPhone/iPad camera roll when the recording is finished.
- **Content mode:** Fit or fill. Just what you see in the recording screen, fill the screen or fit to the real video size.
- **Camera:** This options allows you to choose the camera: rear or front.
- **Chroma:** Enable or disable the green screen function. Enable it to use the chroma key mode. Disable it to record videos without a chroma. Remember to place a green or blue chroma behind you.
- **Background:** Choose the image you want to use as background in the green screen.
 - Photo sources: Camera, device gallery or unsplash.com.
 - You can edit your images from the in-app photo editor.
- **Chroma key color:** Choose what color to use as chroma key. Currently two colours are supported : Green or blue.
- **Resolution:** This option allows you to select which resolution to use in your videos:
 - 640x480
 - 1280x720
 - 1920x1080
 - 3840x2160

Settings - Unsplash

Choose any picture from unsplash.com. Type any text and the results will appear in the screen. Select your desired image and press the  button.

Teleprompter

Show/Hide controllers: Tap twice on the screen to show/hide the controllers.

Play/Pause: Tap once to play/pause your script.

Top bar:

- Dismiss the Teleprompter screen
- Open app settings
- Edit your script on the go
- Open more options:
 - Change text size
 - Mirror mode
 - Countdown*
 - Video effects
 - Go to the next script
 - Go to the previous script
 - Display/Hide your notes
 - Information

Bottom bar:

- Turn on the/off the video: Still not recording.
- Readjust the speed.
- Only with the video turned on:
 1. Change camera. (Rear<-> Front)
 2. Start/Stop recording.
 3. Take picture.
 4. Adjust the AE/AF. Tap on the screen to lock a point.

Important:

If countdown is not configured, it will be set to 10 seconds

To play/pause your script, just tap once on the text area. To show/hide the controls, tap twice.

To change device orientation: Rotate your device when NOT recording.

Teleprompter

To look directly at the camera lens, adjust the width of the script in the “setup” screen. Set it to 30%, for example. In the play mode, the text will scroll near the camera. You can also adjust the script width directly dragging the edge of the script. Script width only works in landscape mode.

In the Green Screen Edition, if you have enabled the chroma in the “setup” screen, and if you have a green or blue surface behind you, the image selected will appear on it. Remember that you must have a green or blue surface to make it work.

Video Camera

You can access the video filters without the play mode. This way you can use the effects whenever you want.

At the top right corner you can access available effects and choose any of them. It will be applied to the video camera.

Use the camera as any other:

- Flip the camera
- Record a video
- Take pictures
- Tap on the screen to block AE/AF

Green Screen Camera

Remember that you need a green / blue surface behind you to make your image appear.

You can access the green screen mode without the play mode. This way you can use the GS whenever you want. Just focus to any green or blue surface to make the image appear.

At the top right corner you can change the chroma color (blue/ green) and choose any image from Unsplash. It will be applied to the video camera. To use any image from your gallery, set your image in the “Setup” screen.

Use the camera as any other:

- Flip the camera
- Record a video
- Take pictures
- Tap on the screen to block AE/AF

Video Gallery

From the home menu you can access all the videos stored in your device. From there you will be able to:

- Export: if your video includes subtitles, when you'll export it, the subtitles will also be exported as .srt file. Another option to get your videos is via "Files" app. Files App > Autokue App > Videos. Use Subtitles directory to get your subtitles.
- Effects
- Trim
- Speed
- Add text
- Add your logo
- Transition
- Delete

In the video editor screen, make your changes and press the "tick" button to process your video. To save it just press the "Save" button.

Caption

If you toggle this function in the “setup” screen, when you record a video, it will generate a .srt file with the captions.

To generate a caption just press the REC button in the play mode.

In the videos’ gallery, if your video includes subtitles, when you’ll export it, the subtitles will also be exported as .srt file. Another option to get your videos is via “Files” app. Files App > Autokue App > Videos. Use Subtitles directory to get your subtitles.
